Breaking ”Are you human?” FLIP challenge

The FLIP challenge by Idena is designed to be an AI-hard way to prove someone is human. This means that it should be relatively easily doable for human while being very difficult for computers to solve automatically.

The FLIP challenge consists of determining which column of pictures tells a story with an example shown on the right.

The goal of this project is to train a model capable of solving the FLIP challenge using state-of-the-art models.

Requirements:
Prior experience and a strong interest in machine learning is recommended. Creativity and programming skills are advantageous.
