

Practical Work / Distributed Systems Lab:

## Improving the Interface of the Jass AI

During the course of multiple student projects, we have developed arguably the best Jass AI of Switzerland (or probably even in the world). Alongside the Jass AI, we have also developed a corresponding website at [jass.ethz.ch](http://jass.ethz.ch). Unfortunately, the features of this website are quite limited, and it struggles with usability and performance issues.

In this project, we will substantially improve the website, on one hand improving the user friendliness and stability, on the other hand adding new features based on the capabilities of our Jass AI.

**Requirements:** Knowledge and previous experience in web development, JavaScript and Python. Basic knowledge of machine learning is an advantage. We will have weekly meetings to address questions, discuss progress and think about future ideas.
