Bring your simulation

Many engineering tasks involves simulating various phenomenon such as in weather forecasting, fluid dynamics, railway modelling, etc. Various techniques can be used to make these simulations faster or less memory intense. If you have an idea for something then you can bring it, and we can have a look at the prospects. One goal can for instance be to speed up the simulations using machine learning.

Requirements:
Knowledge or at least a very strong interest of what should be simulated is required. Prior experience and a strong interest in simulation and HPC is recommended. Creativity and experience with programming are advantageous.
